Abstract

In this article were analyzed the new National Policy on Climate Change, Law No. 12.187/09, compared with the State Policy on Climate Change of the State of São Paulo State Law No. 13.798/09. To develop the study, the authors correlated the new National Policy on Climate Change, its challenges, new regulatory frameworks, difficulties in defining targets for economic sectors, the estimation of greenhouse gases reduction, such as commitment signed by the government in relation to the current State Policy on Climate Change of the State of São Paulo. They conclude that the São Paulo State is one step ahead of the National Policy on Climate Change, with respect to state law be earlier than federal law, and the provision by the end of the second half of 2010 Pioneer Inventory greenhouse effect. The new milestone in the National Policy on Climate Change constitutes a serious commitment of Brazil, which marked a change of attitude in the country face the discussions on climate, and highlighted the historical role of industrialized countries front the concentration of greenhouse effect, and their responsibilities in securing financial assistance to developing countries in carrying out mitigating actions in order to ensure a balanced environment of diffuse right for the good of all and future generations, and only with concessions for all countries to reach a new climate agreement.
